2027 Blue Cross and Blue Shield Service Benefit Plan
FEP Blue Standard and FEP Blue Basic
Section 5(f)(a). FEP Medicare Prescription Drug Program

- **These are the dispensing limitations.**

Standard Option and Basic Option: Subject to manufacturer packaging and your prescriber's instructions, you may purchase up to a 90-day supply of covered drugs and supplies through the pharmacy network.

Under Standard Option and Basic Option

Note: Certain drugs such as narcotics may have additional limits or requirements as established by the U.S. FDA or by national scientific or medical practice guidelines (such as Centers for Disease Control and Prevention, American Medical Association, etc.) on the quantities that a pharmacy may dispense. In addition, pharmacy dispensing practices are regulated by the state where they are located and may also be determined by individual pharmacies. Due to safety requirements, some medications are dispensed as originally packaged by the manufacturer and we cannot make adjustments to the packaged quantity or otherwise open or split packages to create 22, 30, and 90-day supplies of those medications. In most cases, refills cannot be obtained until 75% of the prescription has been used. Controlled substances cannot be refilled until 80% of the prescription has been used. Controlled substances are medications that can cause physical and mental dependence, and have restrictions on how they can be filled and refilled. They are regulated and classified by the DEA (Drug Enforcement Administration) based on how likely they are to cause dependence. Call us or visit our website if you have any questions about dispensing limits. Please note that in the event of a national or other emergency, or if you are a reservist or National Guard member who is called to active military duty, you should contact us regarding your prescription drug needs. See the contact information below.
